Astrophysics

Some but not all astrophysicists know about the Mythos; their knowledge is typically limited to e.g. space and does not include e.g. the Dreamlands, zombies, magic.

Simple knowledge of Mythos-related subjects doesn't harm your sanity. Truly understanding the size of the universe and our true place in the cosmos does. Really really skilled astrophysicists tend to get weird and disconnected from human society, and sometimes have nervous breakdowns.

Science communicators almost never know about the Mythos. Those who do don't communicate it publicly lest they get a helpful visit from Delta Green.
